

# Module description

for the degree programme

Master of Science Clean  
Energy Processes

(Version of examination regulation: 20212)

for the summer term 2025

The enclosed module handbook contains both the modules of the specialisation "Energy technologies" and of the specialisation "Energy systems".

- Modules of specialisation "Energy technologies": pages 12 - 76
- Modules of the specialisation "Energy systems" : pages 77 - 114

# Table of contents

Internship / practical training on industry (1995).....	4
Master's thesis (1999).....	6
Sustainability and environmental ethics (45002).....	8
Advanced seminar (45003).....	10
Specialization modules with laboratory course 1-2	
Clean combustion technology with laboratory course (42903).....	12
Power electronics for decentral energy systems with laboratory course (42904).....	14
Thin-film processing with laboratory course (42905).....	16
Photovoltaic systems - Fundamentals with laboratory course (42906).....	18
Specialization modules 1-4	
Compulsory elective module 1-3	
Particle technology (42938).....	22
Chemical Technologies for the Energy Transition (42939).....	24
Experimental fluid mechanics (42933).....	26
Optical diagnostics in energy and process engineering (42935).....	28
Self-organization processes (42936).....	30
Polymer science and processing (45375).....	32
Physics of turbulence and turbulence modelling II (45221).....	34
Elective modules from other specialization 1-2	
Specialization modules with laboratory course 1-2	
Process control and plant safety with laboratory course (42901).....	38
Phosphors for light conversion in photovoltaic devices and LEDs with laboratory course (42902).....	40
Specialization modules 1-4	
Life cycle assessment (42912).....	43
Phosphors for light conversion in photovoltaic devices and LEDs (42913).....	45
Process control and plant safety (42914).....	47
Process simulation (42915).....	49
Quantitative methods in energy market modelling (52592).....	51
Energy transition analysis: Bridging techno-economic, business, and policy perspectives (57481).....	53
Compulsory elective module 1-3	
Polymer Recycling (42937).....	56
Process systems dynamics 2 (42930).....	58
Scientific computing in engineering 2 (42932).....	60
Recycling of Electronic Wastes (42940).....	61
Elective modules from other specialization 1-2	
Clean combustion technology (42917).....	64
Fuel cells and electrolyzers (42918).....	66
Power electronics for decentralized energy systems (42919).....	68
Pumps and turbines (42920).....	72
Renewable thermal power plants (42921).....	74
Thin-film processing (42922).....	76
Photovoltaic systems - Fundamentals (42923).....	78
Electrical energy storage systems (42924).....	80

1	<b>Module name</b> 1995	<b>Internship (M.Sc. Clean Energy Processes 20212)</b> Internship / practical training on industry	<b>10 ECTS</b>
2	Courses / lectures	No courses / lectures available for this module!	
3	Lecturers	No lecturers available since there are no courses / lectures for this module!	

4	<b>Module coordinator</b>	
5	<b>Contents</b>	The internship is intended to provide an overview of the various activities in a company, a laboratory or research facility in a university or other research institutes through participation in work or project groups. In addition, special skills of engineers are to be acquired, based on the knowledge already acquired in the studies. As a basis for this, the technical and methodological skills acquired in the bachelor's degree are to be implemented. Desirable fields of activity are e.g. energy engineering, chemical engineering, process engineering, electrical engineering, plant engineering and related industries, engineering administration, companies doing research, research institutes or other institutions.
6	<b>Learning objectives and skills</b>	<p>Students:</p> <ul style="list-style-type: none"> <li>• are familiar with typical tasks in the field of clean energy processes or related industries</li> <li>• know and understand the organization and social structure of an industrial company</li> <li>• recognize the interrelationships between the individual areas of a company or other organisation</li> <li>• apply the specialist knowledge gained so far in the course of their studies in industrial practice</li> <li>• reflect on the impact of their actions on the outcome of the tasks entrusted to them</li> <li>• analyze the knowledge required in industry in comparison with the content of their own studies</li> </ul>
7	<b>Prerequisites</b>	None
8	<b>Integration in curriculum</b>	no Integration in curriculum available!
9	<b>Module compatibility</b>	Pflichtmodul Master of Science Clean Energy Processes 20212
10	<b>Method of examination</b>	Practical achievement Course achievement/internship achievement: internship
11	<b>Grading procedure</b>	Practical achievement (pass/fail)
12	<b>Module frequency</b>	no Module frequency information available!
13	<b>Workload in clock hours</b>	Contact hours: ?? h (keine Angaben zum Arbeitsaufwand in Präsenzzeit hinterlegt) Independent study: ?? h (keine Angaben zum Arbeitsaufwand im Eigenstudium hinterlegt)

14	<b>Module duration</b>	?? semester (no information for Module duration available)
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	

1	<b>Module name</b> 1999	<b>Master's thesis (M.Sc. Clean Energy Processes 20212)</b> Master's thesis	<b>30 ECTS</b>
2	Courses / lectures	No courses / lectures available for this module!	
3	Lecturers	No lecturers available since there are no courses / lectures for this module!	

4	<b>Module coordinator</b>	
5	<b>Contents</b>	<p>Independent work on a scientific problem in the field of clean energy processes, depending on their specialisation in one of the following fields:</p> <ul style="list-style-type: none"> <li>• Energy technologies</li> <li>• Energy systems</li> <li>• Electrical Energy engineering</li> <li>• Materials science and engineering</li> <li>• Process engineering</li> </ul> <p>The thesis must be done in either the specializations "Energy Technologies" or "Energy Systems". Furthermore, the topic of the Master's thesis can also be issued by a university lecturer working full-time at the Friedrich-Alexander Universität Erlangen-Nürnberg who is responsible for one of the modules M1 to M6.</p>
6	<b>Learning objectives and skills</b>	<p>Students</p> <ul style="list-style-type: none"> <li>• are able to work independently on a scientific problem from a selected area of the study field clean energy processes within a given time limit</li> <li>• develop independent ideas and concepts to solve scientific problems</li> <li>• deal with theories, terminologies, specifics, limitations and doctrines of the subject in an in-depth and critical way and reflect on them</li> <li>• can apply and further develop suitable scientific methods largely independently - also in new and unfamiliar as well as interdisciplinary contexts - as well as present the results in a scientifically appropriate form.</li> <li>• can present subject-related content clearly and appropriately to the target group, both orally and in writing, and argue the case for it</li> <li>• expand their planning and structuring skills in the implementation of a thematic project.</li> </ul>
7	<b>Prerequisites</b>	<p>Admission requirements for the Master thesis are the acquisition of at least 90 ECTS credits (see programme regulation FPO CEP section 49 (1)). The Master's thesis shall be written in English (see section 49 FPO CEP).</p>

8	<b>Integration in curriculum</b>	no Integration in curriculum available!
9	<b>Module compatibility</b>	Pflichtmodul Master of Science Clean Energy Processes 20212
10	<b>Method of examination</b>	Oral (30 minutes) Written (6 Monate)
11	<b>Grading procedure</b>	Oral (10%) Written (90%) The master thesis and its results have to be presented in a presentation of max. 30 minutes followed by a discussion. The master thesis is worth 27 ECTS credits, the presentation 3 ECTS credits (see FPO CEP section 50 (2)).
12	<b>Module frequency</b>	no Module frequency information available!
13	<b>Resit examinations</b>	The exams of this moduls can only be resit once.
14	<b>Workload in clock hours</b>	Contact hours: ?? h (keine Angaben zum Arbeitsaufwand in Präsenzzeit hinterlegt) Independent study: ?? h (keine Angaben zum Arbeitsaufwand im Eigenstudium hinterlegt)
15	<b>Module duration</b>	?? semester (no information for Module duration available)
16	<b>Teaching and examination language</b>	german
17	<b>Bibliography</b>	

1	<b>Module name</b> 45002	<b>Seminar sustainability and environmental ethics</b> Sustainability and environmental ethics	<b>5 ECTS</b>
2	Courses / lectures	No teaching units are offered for the module in the current semester. For further information on teaching units please contact the module managers.	
3	Lecturers	-	

4	<b>Module coordinator</b>	Prof. Dr. Martin Hartmann Prof. Dr.-Ing. Jürgen Karl
5	<b>Contents</b>	This course introduces the academic approach of sustainability and environmental ethics. It explores how today's human societies can endure in the face of global change, ecosystem degradation and resource limitations. The course focuses on key knowledge areas of sustainability theory and practice, including population, ecosystems, global change, energy, agriculture, water, circular economy, environmental economics and policy, ethics, and cultural history.
6	<b>Learning objectives and skills</b>	Students will become familiar with important concepts of sustainability and environmental ethics and discuss current possibilities, limitations and future challenges.  Students who successfully participate in this module can: <ul style="list-style-type: none"> <li>• Understand the concept and methodology of sustainability and environmental ethics</li> <li>• Apply the methodology of green chemistry and engineering</li> <li>• Identify opportunities for improvements by life cycle sustainability assessments (LCSA)</li> <li>• Collect information on topics of current interest and present the results to the course members orally or in writing</li> <li>• Explain and discuss important new concepts (e.g. planetary boundaries, geoengineering, eco-sufficiency, rebound effect)</li> </ul>
7	<b>Prerequisites</b>	None
8	<b>Integration in curriculum</b>	semester: 1;2;3;4
9	<b>Module compatibility</b>	Pflichtmodul Master of Science Clean Energy Processes 2012
10	<b>Method of examination</b>	Seminar achievement
11	<b>Grading procedure</b>	Seminar achievement (100%)
12	<b>Module frequency</b>	Only in winter semester
13	<b>Workload in clock hours</b>	Contact hours: 60 h Independent study: 90 h
14	<b>Module duration</b>	1 semester

1	<b>Module name</b> 42906	<b>Photovoltaic systems - Fundamentals with laboratory course</b>	<b>7,5 ECTS</b>
2	Courses / lectures	No teaching units are offered for the module in the current semester. For further information on teaching units please contact the module managers.	
3	Lecturers	-	

4	<b>Module coordinator</b>	Prof. Dr. Christoph Brabec	
5	<b>Contents</b>	The lecture will introduce the fundamentals of photovoltaic energy conversion. The conversion of light into electricity is one of the most efficient power technologies of today and is expected to transform our energy system towards a renewable scenario. The limits of photovoltaic energy conversion, the materials and architectures of major PV technologies and advanced characterization methods for modules as well as solar fields will be introduced theoretically and experimentally during the lecture, exercises and the lab works.	
6	<b>Learning objectives and skills</b>	<ul style="list-style-type: none"> <li>The students will learn the concept of black body radiation and the radiation laws and the limits of light energy conversion. The fundamental semiconductor junctions (p-n, M-i-M, Schottky and Hetero Junction) are repeated. The one diode and two diodes replacement circuits are explained. Electrical, optical, recombination and extraction loss mechanisms are discussed separately and demonstrated at the hand of numerical drift-diffusion equation solvers. The most important solar cell concepts (Si, CIGS, CdTe, GaAs, Perovskites, Organics) are introduced, and the strengths and weaknesses of each technology are analysed.</li> <li>Characterization of Photovoltaic Modules will be trained by flashed measurements in the lab. Defect imaging methods like DLIT, EL or PL imaging will be trained at the hand of module installations in Erlangen.</li> </ul>	
7	<b>Prerequisites</b>	Prerequisites: Bachelor in Material Science, Nanotechnology, Energy Technology, Electronic Engineering, Computer Science, Physics, Chemistry, Chemical Engineering, Nanotechnologie, Energietechnik, Elektrotechnik, Physik, Chemie or comparable	
8	<b>Integration in curriculum</b>	semester: 1;2;3;4	
9	<b>Module compatibility</b>	Specialisation modules with laboratory course 1-2 Master of Science Clean Energy Processes 20212	
10	<b>Method of examination</b>	Variable Variable Prüfungsart: Klausur (45 Minuten, benotet) Written exam, graded	
11	<b>Grading procedure</b>	Variable (pass/fail) Variable (100%) The exam counts 100%	

12	<b>Module frequency</b>	Only in winter semester
13	<b>Workload in clock hours</b>	Contact hours: 75 h Independent study: 150 h

1	<b>Module name</b> 52592	<b>Quantitative methods in energy market modelling</b>	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung mit Übung: MA Quantitative Methods in Energy Market Modelling (3 SWS)	5 ECTS
3	Lecturers	Prof. Dr. Karl Gregor Zöttl	

4	<b>Module coordinator</b>	Prof. Dr. Karl Gregor Zöttl	
5	<b>Contents</b>	<p>It is the purpose of the course to understand and quantitatively analyse the economic interaction of the players and institutions in liberalized energy markets.</p> <p>Liberalized electricity markets can be segmented in a regulated part (the networks) and the non-regulated parts (generation and retail) where private companies interact in a market environment. The interaction of the different agents is analysed with computational equilibrium frameworks based the concepts applied in industrial organization. Next to the fundamental understanding of the relevant market interaction, the models allow for a quantitative analysis of proposals for the design of energy markets. The participants thus develop the tools for an autonomous assessment of currently discussed policies in liberalized electricity markets (e.g. changed support schemes for renewables, changed network tariff systems, impact of capacity markets).</p> <p>The course aims at students in the field of economics /business as well as students in the fields of engineering and mathematics. An integral part of the course id formed by homework assignments conducted in groups. The ability to cooperate also beyond the classical limits of each discipline is an important qualification for the students careers, which should be stimulated in the context of this course.</p>	
6	<b>Learning objectives and skills</b>	<p>The students:</p> <ul style="list-style-type: none"> <li>• develop a clear picture of the relevant market participants in liberalized electricity markets and understand their incentives and objectives</li> <li>• learn fundamental concepts and models which allow to analyze the interaction at those markets</li> <li>• get to know important publically available data sources which allow for a quantitative analysis of the market situations considered</li> <li>• know the current challenges when designing those markets and can quantitatively analyze the solutions proposed in the current policy debate.</li> </ul>	
7	<b>Prerequisites</b>	<p>The students should be familiar with the mathematical methods acquired during their Bachelor degree. Institutional knowledge of electricity markets is not required.</p>	
8	<b>Integration in curriculum</b>	semester: 1;2;3;4	
9	<b>Module compatibility</b>	<p>Elective modules from other specialisation 1-2 Master of Science Clean Energy Processes 20212 Specialisation modules 1-4 Master of Science Clean Energy Processes 20212</p>	

10	<b>Method of examination</b>	Written examination Written assignment/Seminar paper (Work on assignment sheets in groups of up to 3 students, approx. 15 pages) Written examination (90 minutes)
11	<b>Grading procedure</b>	Written examination (80%) Written assignment/Seminar paper (20%)
12	<b>Module frequency</b>	Only in summer semester
13	<b>Workload in clock hours</b>	Contact hours: 45 h Independent study: 105 h
14	<b>Module duration</b>	1 semester

1	<b>Module name</b> 57481	<b>Energy transition analysis: Bridging techno-economic, business, and policy perspectives</b>	<b>5 ECTS</b>
2	Courses / lectures	No teaching units are offered for the module in the current semester. For further information on teaching units please contact the module managers.	
3	Lecturers	-	

4	<b>Module coordinator</b>	Aksornchan Chaianong
5	<b>Contents</b>	<p>The energy sector is undergoing a deep transformation driven by technological innovation, market dynamics, and policy interventions. This course will provide a comprehensive interdisciplinary analysis of the energy transition, focusing on the interactions between techno-economic, business models/markets, and policy analysis.</p> <p>Through lectures and exercises, students will learn how to assess the economic feasibility, business model/market potential, and policy impacts/implications of different clean energy projects, such as (but not limited to) renewable energy, energy storage, and hydrogen. Topics included are listed below.</p> <ul style="list-style-type: none"> <li>• Techno-economic analysis: principles of costs and benefits, financial modeling, and investment analysis of a particular clean energy project.</li> <li>• Business model/market analysis: business models, market opportunities and challenges, and potential barriers to adoption.</li> <li>• Policy evaluation: impacts of the policy instruments on the project feasibility and investment attractiveness.</li> </ul> <p>The course will also emphasize the application of analytical tools to real-world case studies, enabling students to understand how to combine these tools effectively for energy transition assessment. At the end, we will discuss how to derive policy recommendations based on the evaluation results.</p>
6	<b>Learning objectives and skills</b>	<p>At the end of the course, the students are able to:</p> <ul style="list-style-type: none"> <li>• Develop a deep understanding of the multifaceted nature of the energy transition.</li> <li>• Conduct an energy transition analysis from interdisciplinary perspectives, considering techno-economic factors, market dynamics, and policy implications.</li> <li>• Apply/combine concepts and tools to solve real-world problems related to clean energy adoption in different contexts.</li> <li>• Formulate policy recommendations to address challenges and opportunities in the energy transition.</li> </ul>
7	<b>Prerequisites</b>	Good command of English (written and spoken).

8	<b>Integration in curriculum</b>	no Integration in curriculum available!
9	<b>Module compatibility</b>	Elective modules from other specialisation 1-2 Master of Science Clean Energy Processes 20212 Specialisation modules 1-4 Master of Science Clean Energy Processes 20212 Elective outside WiSo for Energy Technology and Clean Energy Processes.
10	<b>Method of examination</b>	Written or oral One <i>individual seminar paper</i> (max. 5,000 words) <ul style="list-style-type: none"> <li>Each student must choose at least one clean energy project in a specific area/country to be covered in the paper. They must develop arguments based on three perspectives (techno-economic, business/market, and policy) discussed in the class to show whether this area/country should adopt this project and what the actionable insights and policy recommendations would be.</li> </ul> One <i>individual 15-minute presentation</i> during the classes <ul style="list-style-type: none"> <li>Each student must present their work in progress on the seminar paper. They must present the results from at least one (out of three) of the abovementioned perspectives. Moreover, they are required to briefly talk about their plans to approach the remaining analysis perspectives.</li> </ul>
11	<b>Grading procedure</b>	Written or oral (100%) Seminar paper (60%) Presentation (40%)
12	<b>Module frequency</b>	Only in winter semester
13	<b>Workload in clock hours</b>	Contact hours: 60 h Independent study: 90 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	Will be announced during the course.

# Compulsory elective module 1-3

1	<b>Module name</b> 42937	<b>Polymer Recycling</b>	<b>5 ECTS</b>
2	Courses / lectures	No teaching units are offered for the module in the current semester. For further information on teaching units please contact the module managers.	
3	Lecturers	-	

4	<b>Module coordinator</b>	Dr. Jochen Schmidt	
5	<b>Contents</b>	<ul style="list-style-type: none"> <li>• Introduction to polymer recycling and the circular economy of plastics (definitions, basic concepts, plastic wastes as a valuable and sustainable resource, challenges)</li> <li>• Collection and sorting of plastic wastes (collection schemes, (fundamentals of) separation and classification processes, sorting and recycling plants)</li> <li>• Chemical recycling of plastics (solvolysis, thermolysis, pyrolysis)</li> <li>• Mechanical recycling of thermoplasts (extrusion, injection moulding, examples (primary recycling of polyethyleneterephthalate, secondary recycling of polyolefins etc.))</li> <li>• Thermoplast recyclates –additive enhancement and challenges in processing (compatibilizers, antioxidants etc.)</li> <li>• ‘Thermal recycling’ of waste streams</li> <li>• Recycling of fiber-enhanced composites (cf. rotor blades</li> <li>• Trends towards more sustainable plastics – recent innovations in polymer recycling, recycling of biopolymers?</li> </ul>	
6	<b>Learning objectives and skills</b>	<p>This module aims to provide an introduction into the state of the art of plastic recycling. Current regulations in plastic waste management throughout the world, as well as the demands towards more sustainable plastics and the transition to a circular economy pose many challenges in collection and sorting of plastics wastes and their conversion to (processable) recyclates. This course will provide the concepts of collection and sorting of plastic wastes as well as the basics of chemical, mechanical recycling and thermal conversion of plastic waste streams.</p> <p>The students will learn to understand ‘plastic wastes’ as a sustainable resource for the plastics and chemical industries. Moreover, they will be able to assess the most useful recycling approach for a certain waste stream depending on composition and degree of contamination. In the context of mechanical recycling of thermoplasts, the students will be able to assess viable strategies of additive enhancement of recyclates to cope with the challenges in processing.</p>	
7	<b>Prerequisites</b>	<u>Required</u> (General) chemistry, basics of organic chemistry Polymer Science and Processing	

		<u>Recommended</u> Materials and Structure Polymer Science and Processing Life Cycle Assessment

6	<p><b>Learning objectives and skills</b></p>	<p>ENGLISH DESCRIPTION:  Students who participate in this course will become familiar with the basics of decentral energy systems, their components and operation.  After successfully completing this module, students:</p> <ul style="list-style-type: none"> <li>• know the structure and topologies of local low-voltage direct current grids, the most important properties and error scenarios</li> <li>• know the electrical properties of battery storage and regenerative power sources</li> <li>• know the basic circuits of the various power electronic converters in a DC grid (DC / DC and AC / DC converters), their advantages and disadvantages</li> <li>• understand the arc problem</li> <li>• know solutions for the implementation of DC-compatible plugs, switches and protective devices</li> <li>• know procedures for controlling decentral DC grids</li> <li>• can model switch-mode converters and grids with regard to their dynamic behavior</li> <li>• know procedures for impedance measurement in grids "under load"</li> <li>• can carry out stability studies on DC grids</li> <li>• are familiar with modern device power supply solutions using protective extra-low voltage</li> </ul> <p>During the practicum students learn:</p> <ul style="list-style-type: none"> <li>• dealing with power electronics measurement equipment</li> <li>• measuring typical characteristics and important parameters of a power electronic circuit</li> <li>• how to avoid the most common measurement problems</li> <li>• safety rules when dealing with power electronics</li> </ul> <p>GERMAN DESCRIPTION:  Die Studierenden</p> <ul style="list-style-type: none"> <li>• kennen den Aufbau und die Topologien lokaler Niederspannungs-Gleichstromnetze, die wichtigsten Eigenschaften und Fehlerszenarien</li> <li>• kennen die elektrischen Eigenschaften von Batteriespeichern und regenerativen Stromquellen</li> <li>• kennen die Grundsaltungen der verschiedenen leistungselektronischen Wandler in einem Gleichspannungsnetz (DC/DC- und AC/DC-Wandler)</li> </ul>

		<ul style="list-style-type: none"> <li>• analysieren die Schaltungsoptionen bezüglich ihrer Vor- und Nachteile</li> <li>• verstehen die Lichtbogenproblematik</li> <li>• kennen Lösungen zur Realisierung von gleichspannungstauglichen Steckern, Schaltern und Schutzgeräten</li> <li>• kennen Verfahren zur Regelung lokaler Gleichspannungsnetze</li> <li>• können Schaltwandler und Netze bezüglich ihres dynamischen Verhaltens modellieren</li> <li>• kennen Verfahren zur Impedanzmessung in Netzen unter Last"</li> <li>• können Stabilitätsbetrachtungen an Gleichspannungsnetzen durchführen</li> <li>• kennen moderne Gerätestromversorgungslösungen mit Schutzkleinspannung</li> </ul>
7	<b>Prerequisites</b>	Recommended/Empfohlen: <ul style="list-style-type: none"> <li>• Fundamentals of Electrical Engineering I-III, Power Electronics</li> <li>• Grundlagen der Elektrotechnik I-III, Leistungselektronik</li> </ul>
8	<b>Integration in curriculum</b>	semester: 1;2;3;4
9	<b>Module compatibility</b>	Elective modules from other specialisation 1-2 Master of Science Clean Energy Processes 20212 Specialisation modules 1-4 Master of Science Clean Energy Processes 20212
10	<b>Method of examination</b>	Written examination (90 minutes) Die Prüfung richtet sich nach dem didaktischen Charakter des Moduls und umfasst entweder eine mündliche Prüfung von 30 min oder eine Klausur von 90 min Dauer. Die Entscheidung für eine Prüfungsform wird in Semestern, in denen die Lehrveranstaltungen stattfinden, spätestens zwei Wochen nach Vorlesungsbeginn in der Lehrveranstaltung bzw. den Lehrveranstaltungen und in der StudOn-Gruppe bekannt gegeben. In Semestern, in denen keine Lehrveranstaltungen stattfinden, wird die Prüfungsform spätestens zwei Monate vor der Wiederholungsprüfung durch E-Mail an die angemeldeten Prüflinge bekannt gegeben.
11	<b>Grading procedure</b>	Written examination (100%) 100%
12	<b>Module frequency</b>	Only in summer semester
13	<b>Workload in clock hours</b>	Contact hours: 60 h Independent study: 90 h
14	<b>Module duration</b>	1 semester

15	<b>Teaching and examination language</b>	german english
16	<b>Bibliography</b>	<ul style="list-style-type: none"> <li>• Lecture Notes</li> <li>• "Power Electronics for Distributed Power Supply - DC Networks"</li> <li>• Skript zur Vorlesung</li> <li>• "Leistungselektronik für dezentrale Energieversorgung - Gleichspannungsnetze"</li> </ul>

1	<b>Module name</b> 42920	<b>Pumps and turbines</b>	<b>5 ECTS</b>
2	Courses / lectures	No teaching units are offered for the module in the current semester. For further information on teaching units please contact the module managers.	
3	Lecturers	-	

4	<b>Module coordinator</b>	apl. Prof. Dr. Stefan Becker	
5	<b>Contents</b>	Classification and work transfer in pumps and turbines <ul style="list-style-type: none"> <li>• Fluid mechanical fundamentals of turbomachinery</li> <li>• Efficiency, characteristics and operating behavior</li> <li>• Characteristic numbers</li> <li>• Design procedure</li> <li>• CFD simulation</li> <li>• Low-noise turbomachines</li> <li>• Application: fans and blowers</li> <li>• Application: wind turbines</li> </ul>	
6	<b>Learning objectives and skills</b>	Students who participate in this course will become familiar with basic concepts of pumps and turbines.  Students who successfully participate in this module: <ul style="list-style-type: none"> <li>• Can select adequate pumps and turbines for different applications</li> <li>• Have a comprehensive understanding of the different types of turbomachinery and their limitations and possibilities in the various fields of application</li> <li>• Can design rotors and turbines</li> <li>• Are familiar with the use of turbomachines in accordance with the latest environmental protection guidelines</li> <li>• Can determine the entire process from the given boundary conditions, objective design and simulation to the construction of impellers</li> <li>• Gain experience in practical realization for industrial applications</li> </ul>	
7	<b>Prerequisites</b>	To succeed in this course, students will need to apply acquired knowledge from e.g. fluid mechanics, solid mechanics and mathematics. A solid background in mathematics is required, since differential equations and integrals form the basis for the description of the fluid dynamic processes and their kinematics. Basic knowledge in thermodynamics and fluid simulation is beneficial.	
8	<b>Integration in curriculum</b>	semester: 1;2;3;4	
9	<b>Module compatibility</b>	Elective modules from other specialisation 1-2 Master of Science Clean Energy Processes 20212 Specialisation modules 1-4 Master of Science Clean Energy Processes 20212	
10	<b>Method of examination</b>	Variable Klausur, 90 Minuten	

11	<b>Grading procedure</b>	Variable (100%)
12	<b>Module frequency</b>	Only in winter semester
13	<b>Workload in clock hours</b>	Contact hours: 90 h Independent study: 60 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	<ul style="list-style-type: none"> <li>• Fluid Mechanics and Thermodynamics of Turbomachinery, S. Larry Dixon und Cesare Hall</li> <li>• Wind Turbine Noise, S. Wagner</li> <li>• Fluid Mechanics, F. Durst</li> </ul>

1	<b>Module name</b> 42921	<b>Renewable thermal power plants</b>	<b>5 ECTS</b>
2	Courses / lectures	No teaching units are offered for the module in the current semester. For further information on teaching units please contact the module managers.	
3	Lecturers	-	

4	<b>Module coordinator</b>	Dr.-Ing. Sebastian Rieß Prof. Dr.-Ing. Michael Wensing	
5	<b>Contents</b>	<p>Content: Thermodynamic basics, primary energy situation worldwide, sustainable energy resources, CO2 capture and storage, CO2-free energy sources and processes (water, wind, biomass, geothermal energy, photovoltaics), energy management (energy demand, energy reserves, primary energy sources, environmental impact, sustainable and fossil power plant types in comparison; thermal cycle processes (steam turbines, gas turbines, engines, combined processes); renewable power plants, effects of sustainable energy sources on the machine design in power plants, energy economics, efficient usage, energy storage, electro-chemical power processes, climate change, renewable energies</p> <p>Description of the exercise: The exercise programme, which is scheduled with 3 SWS, is conducted in seminar form. Participants are divided into groups that work together on a project on regenerative energy supply. Project contents can be, for example, concepts for CO2 reduction for a neighbourhood, a city, region or a larger industrial company. The exercise is accompanied as a project course by experienced experts from industry who are available to the students for discussion. Meetings take place weekly during the exercise times. As a result, the project groups submit a report on their findings and give a final presentation. These two performances together constitute the students' examination performance. There is no separate examination.</p>	
6	<b>Learning objectives and skills</b>	<p>Students who successfully participate in this module:</p> <ul style="list-style-type: none"> <li>• know technologies and components of power plant engineering</li> <li>• have a fundamental overview of energy-economic issues in power plant technology</li> <li>• are able to analyze energy conversion processes for the generation of power and electrical energy in thermal and other power plants</li> <li>• can understand the technical implementation of power plants and develop and evaluate proposals for optimization</li> <li>• apply thermodynamic principles for process optimization and can further develop these methods for process optimization</li> <li>• discuss alternative solutions for energy production with regard to sustainability and environmental protection</li> </ul>	

		<ul style="list-style-type: none"> <li>• have an overview of the possibilities of CO<sub>2</sub>-free energy production and can evaluate energy sources and energy processes under aspects of sustainability and environmental impact</li> </ul>
7	<b>Prerequisites</b>	To succeed in this course, students will need to apply acquired knowledge from basics in process engineering especially engineering thermodynamics and principles of transport. Basic knowledge in general chemistry is beneficial.
8	<b>Integration in curriculum</b>	semester: 1;2;3;4

1	<b>Module name</b> 42923	<b>Photovoltaic systems - Fundamentals</b>	<b>5 ECTS</b>
2	Courses / lectures	No teaching units are offered for the module in the current semester. For further information on teaching units please contact the module managers.	
3	Lecturers	-	

4	<b>Module coordinator</b>	Prof. Dr. Christoph Brabec	
5	<b>Contents</b>	The lecture will introduce to the fundamentals of photovoltaic energy conversion. The conversion of light into electricity is one of the most efficient power technologies of today and is expected to transform our energy system towards a renewable scenario. The limits of photovoltaic energy conversion, the materials and architectures of major PV technologies and advanced characterization methods for modules as well as solar fields will be introduced theoretically and experimentally during the lecture and exercises.	
6	<b>Learning objectives and skills</b>	<ul style="list-style-type: none"> <li>The students will learn the concept of black body radiation and the radiation laws and the limits of light energy conversion. The fundamental semiconductor junctions (p-n, M-i-M, Schottky and Hetero Junction) are repeated. The one diode and two diodes replacement circuits are explained. Electrical, optical, recombination and extraction loss mechanisms are discussed separately and demonstrated at the hand of numerical drift-diffusion equation solvers. The most important solar cell concepts (Si, CIGS, CdTe, GaAs, Perovskites, Organics) are introduced, and the strengths and weaknesses of each technology are analysed.</li> <li>Characterization of Photovoltaic Modules will be trained by flashed measurements in the lab. Defect imaging methods like DLIT, EL or PL imaging will be trained at the hand of module installations in Erlangen.</li> </ul>	
7	<b>Prerequisites</b>	None

3	Lecturers	Prof. Dr. Martin März Dr.-Ing. Bernd Eckardt	

4	<b>Module coordinator</b>	Dr.-Ing. Bernd Eckardt	
5	<b>Contents</b>	<p>Content:</p> <p>Introduction to electric energy storage systems and their applications regarding the mode of operation and load scenarios in mobile and stationary applications</p> <ul style="list-style-type: none"> <li>• Basics on electrochemical and physical energy storage systems as well as the used electronics for measuring (e.g. battery management system (BMS)) and connecting the storage to the source or load (e.g. power electronic).</li> <li>• Different electrochemical storage systems (Pb, NiCd, NiMH, NaNiCl<sub>2</sub>, Lilo), fuel cells, flywheels, capacitors and thermal storages</li> <li>• Basics on analytic calculations of necessary ratings for mobile an stationary applications according to capacity, charge and discharge power, losses and lifetime</li> <li>• Safety aspects using energy storage systems</li> </ul>	
6	<b>Learning objectives and skills</b>	<p>Students who participate in this course get basic knowledge on the use and selection of different electric energy storage systems. Therefore the most common used electrochemical storage systems are presented and the specific properties are discussed. Further on storage solutions based on capacitors, flywheels and fuel cells are covered. The basic electric performance and the system behavior is described. For different applications the students learn to specify the necessary requirements, to work with available datasheets and to configure electric storage systems.</p>	
7	<b>Prerequisites</b>	<p>Prerequisites:</p> <p>To succeed in this course, students will need basic knowledge in chemistry and electronics.</p>
